

Venue Host

DJ Lineup Module Guide

Core idea

Set the Event Schedule first, then add DJs inside that event window. Manual buttons use the selected row. Auto-shout follows the current scheduled DJ based on FFXIV Server Time / UTC.

Fast flow

1. Open DJ Lineup.
2. Set the Event Schedule start and end date/time.
3. Fill Venue and Giveaway details.
4. Add DJs inside the event window.
5. Check each stream link and DJ time slot.
6. Use manual buttons with the selected row, or enable Auto-Shout in Settings.
7. Review the Macros tab before doors open.

1. DJ Lineup page

Event schedule

Start

2026-05-16

18:00 ▼

End

2026-05-17

03:00 ▼

Dates/times are ST / UTC. DJ row times are interpreted inside this event window.

DJ schedule inside event window (ST / UTC)

Manual buttons use the selected row. Auto-shout follows the event window in ST/UTC.

Order	DJ	Link	Start	End	Giveaway
1	Rey Alex	https://www.twitch.tv/reyalexxx	18:00 ▼	19:00 ▼	✓
2	Raindrop Kitty	https://www.twitch.tv/raindropkitty	19:00 ▼	20:00 ▼	✓
3	Khangomon	https://www.twitch.tv/khangomon	20:00 ▼	21:00 ▼	✓
4	Gaia	https://www.twitch.tv/dj_gaia	21:00 ▼	22:00 ▼	✓

Print screen: DJ Lineup area with Event Schedule, Event Details and DJ rows.

Important

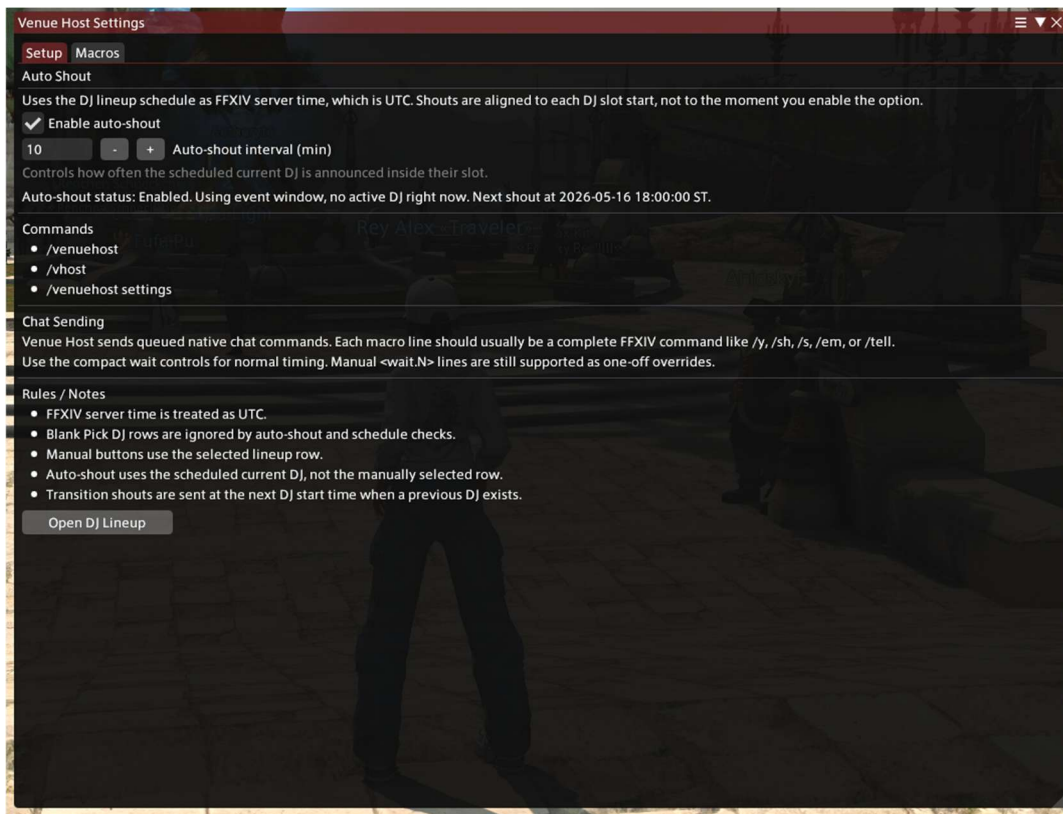

The DJ rows are interpreted inside the Event Schedule window. If your event runs past midnight, set the end date to the next day.

Item	What it means
Event Start / End	Defines the full event window, using FFXIV Server Time / UTC.
Venue	Used by macro variables such as {VenueName}.
Giveaway	Enables giveaway text for rows where the giveaway checkbox is active.
Command	The Twitch/chat command used in giveaway text, for example !urban.
DJ rows	Each row needs a DJ, link, start time, end time and optional giveaway flag.
Link	Clickable stream link. Permanent DJ links should be edited in DJ Database.
Selected row	Manual buttons use the selected row. Auto-shout does not.

Example

Event window: 18:00 to 03:00. DJ rows can be 18:00-19:00, 19:00-20:00, etc. The end date should be the next day if the event crosses midnight.

2. Setup page and Auto-Shout

Print screen: Settings > Setup page with Auto-Shout, commands and notes.

DJ Lineup + Auto-Shout Interval

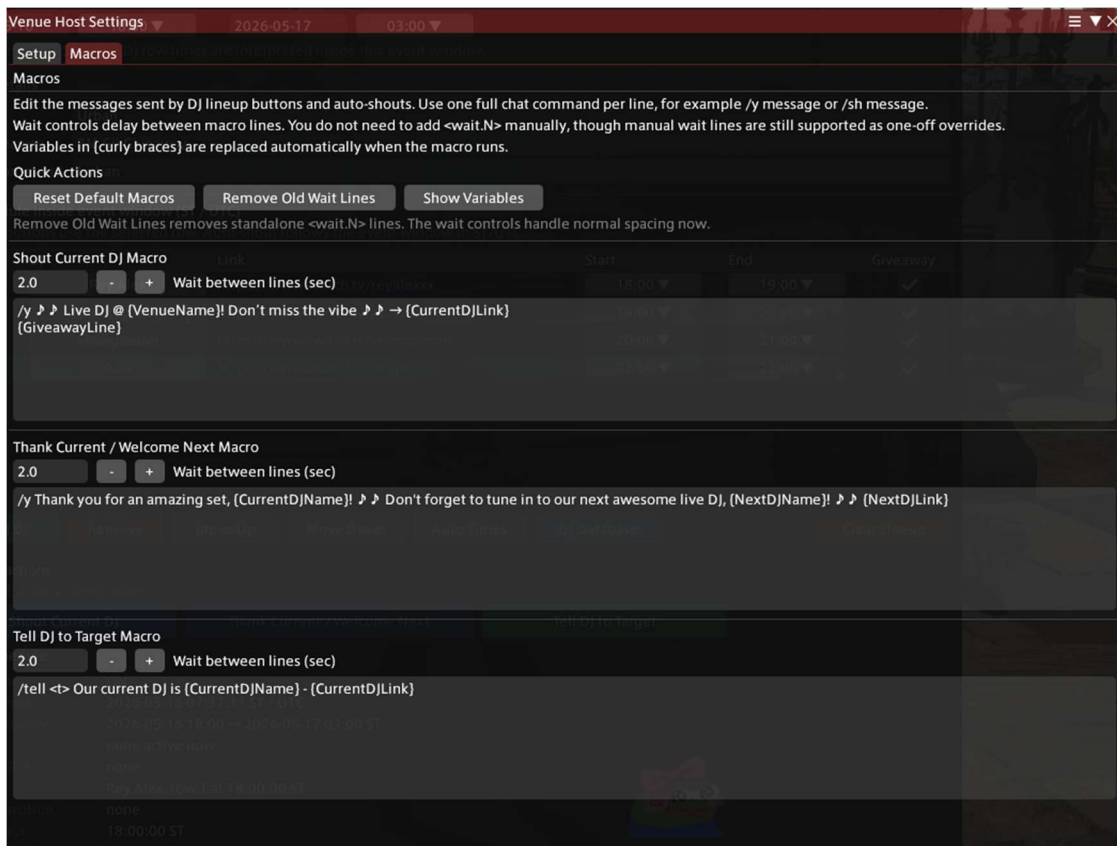

DJ Lineup decides who is active. Auto-Shout Interval decides how often that active DJ is announced during their slot.

Item	What it means
Enable Auto-Shout	Turns on scheduled DJ announcements.
Auto-Shout Interval	Repeat timing for current DJ announcements while the DJ slot is active.
Auto-Shout Status	Shows whether a DJ is active and when the next shout is expected.
Commands	/venuehost and /vhost open the main window. /venuehost settings opens settings.
Chat Sending	Each macro line should normally be one full FFXIV command, such as /y, /sh, /s, /em or /tell.

Example interval

If DJ 1 plays from 18:00 to 19:00 and the interval is 10 minutes, Venue Host can announce at 18:00, 18:10, 18:20, 18:30, 18:40 and 18:50.

3. Macros and Variables

Print screen: Settings > Macros page with macro text boxes and wait controls.

Macro rule

Use one full chat command per line. The wait box controls normal spacing, so you usually do not need manual <wait.N> lines.

Item	What it means
Shout Current DJ	Announces the DJ currently playing.
Thank Current / Welcome Next	Thanks the current DJ and welcomes the next DJ.
Tell DJ to Target	Sends current DJ info to the selected player with /tell.
Wait between lines	Delay between each macro line.
Remove Old Wait Lines	Cleans standalone <wait.N> lines from older macro text.
Reset Default Macros	Restores default macro text if something gets messy.

Variables used by DJ Lineup macros

Item	What it means
{VenueName}	Venue name from Event Details.
{GiveawayLine}	Giveaway message generated from Giveaway and Command settings, blank when not active.
{CurrentDJName}	Name of the selected/current scheduled DJ.
{CurrentDJLink}	Stream link of the selected/current scheduled DJ.
{NextDJName}	Name of the next DJ in the lineup.
{NextDJLink}	Stream link of the next DJ in the lineup.
{TargetName}	Current selected/targeted player name, used mostly with /tell macros.

Manual vs auto

Manual buttons use the selected row. Auto-shout uses the DJ row that matches the current Server Time / UTC inside the Event Schedule.

4. DJ Database and CSV

Use the DJ Database as your reusable DJ address book. Save the DJ name and stream link once, then pick that DJ when building future lineups instead of typing everything again.

Database idea

DJ Database is for permanent reusable DJs. DJ Lineup is for tonight's event schedule. Edit saved names and links in DJ Database, then use them in the lineup.

Item	What it means
Add DJ	Creates a new DJ entry in the database. Fill the name and stream link, then save it.
Save	Stores changes to that DJ. Saved DJs can be reused in future lineups and should survive plugin updates.
Remove	Deletes a DJ from the database after confirmation. Use this for old or duplicate entries.
Name	The DJ display name used when selecting DJs and when macro variables insert the DJ name.
Link	The saved Twitch or stream link used by the lineup and macro variables such as {CurrentDJLink}.
Best practice	
Keep the DJ Database tidy before the event. Fix names and links there first, then build the DJ Lineup from those saved entries.	

Item	What it means
Export CSV	Opens a Save File window and exports the DJ Database to a CSV file.
Import CSV	Opens an Open File window and imports DJs from a CSV file.
CSV format	Name,Link.
Recommended use	Export a backup before big events, before testing new builds, or when sharing the DJ list with another host.

5. Quick troubleshooting

Item	What it means
Auto-shout says no active DJ	Check current ST / UTC and confirm a DJ row is inside the Event Schedule window.
Wrong DJ announced	Auto-shout follows time, not selected row. Check the DJ row start/end times.
Manual button uses wrong DJ	Click the correct DJ row first.
Giveaway missing	Enable Giveaway in Event Details and tick Giveaway on the DJ row.
Link does not open	Confirm the link starts with http:// or https://.
Event crosses midnight	Set the End date to the next day.
Before doors open checklist	
Set Event Schedule, add DJs, check links, enable giveaway rows, review macros, test one manual shout, then enable Auto-Shout if needed.
